

12V Two Wire Mini Track System

Description: Two wire mini track is a commercial grade lighting solution designed to accept a 12v DC feed. There are options for either remote power supply or an in-line transformer. Being a low voltage solution, end clients can safely and easily adjust/move fittings as needed to suit changing displays. Track can be easily cut down on site and joined with a variety of connectors. Boasting a size of 13 x 14mm, this is the perfect system for high end gallery and display applications. Refer to microtrack heads for compatible fittings. Not suitable to be used with standard 240v AC 3 and 4 wire track light fittings.
